

# FACTS

Just six inches of wet snow on a 45-foot trailer is an additional 2,400 pounds. By eliminating this extra weight, you save money.

There is documented cases all over the United States of serious injury and even death occurring when snow starts to freeze causing ice to form and then become ejected from commercial vehicle roofs.

The government has no idea how to remedy the problem. They are forcing the trucking industry to come up with a solution. In either case the government will be enforcing the law with hefty fines

### \*\*\* RISK \*\*\*

Personal liability claims from snow and ice slabs causing an accident, injury or a fatality. Financial liability in those cases would be up to judges and juries. One personal injury or death from the negligence of not cleaning the snow or ice off the vehicle could be in the millions.

### \*\*\* RISK \*\*\*

Companies will face heavy fines, as do their drivers, if snow or ice slabs fall from a truck or trailer causing personal injury and/or property damage.

## *Specializing in Commercial Thermal De-icers*

**HEAT MATT PRODUCTS**

*Melts Snow / Ice*

*Environmentally  
Safe*

*Lightweight*

*Maintenance Free*

*Energy Efficient*

*Reduce Lawsuits  
And Prevent Fines*

*Reduce Fuel  
Consumption*

**MADE IN THE USA**

**Patent Pending**

## **PROBLEM - ICE AND SNOW**

Ice and Snow is a problem that plagues everyone who owns or drives a vehicle.

Any trucking company and/or owner operator knows that when winter arrives, everyone is at RISK ! Drivers as well as innocent pedestrians.

It is extremely risky to have employees and/or drivers clear snow and ice from a typical 13 foot high trailer.

Several states, including New Jersey, have proposed a one year extension for the truckers to find a solution to this problem.

Pennsylvania currently has a bill (HB121) in their state senate which will require snow and ice slabs be removed from the rooftops of commercial vehicles of all types, including tractor trailers, before traveling their roadways

***IT WILL BECOME LAW !***

## **PROBLEM SOLVED THERMAL DE-ICER SYSTEM**

We design heating systems to fit your needs !

Heat Matt Products (HMP) has designed an insulated heat panel that can be installed inside commercial vehicles.

Our system can be installed on new and existing trailers

Thermal De-icers are installed in between the support rail on the ceiling. We DO NOT use any needed cubic space within the trailer if you order the trailer from the manufacture with our system installed.

The Thermal De-icers are powered by the trucks power. We also have an optional plug in dock power system that can be design to work with any trailer. Both systems will provide constant heat to the trailers roof to avoid the build-up of snow and ice.

In a typical 53' trailer there would be 26 panels with a combined weight of 75-175 lbs. We have designed our panels to weigh less than 5lbs per panel.

HMP Thermal De-icers can be fitted in box trucks, buses, any length tractor trailer or most types of commercial vehicles.
